In metrology, measurement uncertainty is the expression of the statistical dispersion of the values attributed to a measured quantity. All measurements are subject to uncertainty and a measurement result is complete only when it is accompanied by a statement of the associated uncertainty, such as the standard deviation. By international agreement, this uncertainty has a probabilistic basis and ...

Measurement is the assignment of a number to a characteristic of an object or event, which can be compared with other objects or events. The scope and application of measurement are dependent on the context and discipline. In the natural sciences and engineering, measurements do not apply to nominal properties of objects or events, which is consistent with the guidelines of the International ...

As part of a weight/fat loss challenge, I had my first Dexa done 5 weeks ago. Last week I decided to repeat the test to track my progress. The results showed that I gained 1 pound of muscle and lost 1.5% fat in 4 weeks, almost proportionally in the entire body.
