Habituation is an example of non-associative learning in which the strength or probability of a response diminishes when the stimulus is repeated. The response is typically a reflex or unconditioned response. Thus, habituation must be distinguished from extinction, which is an associative process. In operant extinction, for example, a response declines because it is no longer followed by a reward.

19th century. Colonial New England encouraged its towns to support free public schools funded by taxation. In the early 19th century Massachusetts took the lead in school reform, with programs designed by Horace Mann that were widely emulated across the North. Teachers were especially trained in normal schools and taught the three Rs (of reading, writing, and arithmetic) and also history and ...
