Fourier-transform infrared spectroscopy (FTIR) is a technique used to obtain an infrared spectrum of absorption or emission of a solid, liquid or gas. An FTIR spectrometer simultaneously collects high-spectral-resolution data over a wide spectral range. This confers a significant advantage over a dispersive spectrometer, which measures intensity over a narrow range of wavelengths at a time.

The Fourier transform of a periodic function,  $s P(t)$ , with period  $P$ , becomes a Dirac comb function, modulated by a sequence of complex coefficients:  $\hat{s} = \hat{s} \langle \dots \hat{s} \rangle$  for all integer values of  $k$ , and where  $\hat{s} \langle P$  is the integral over any interval of length  $P$ . The inverse transform, known as Fourier series, is a representation of  $s P(t)$  in terms of a summation of a potentially infinite number ...

The Fourier Transform for continuous signals is divided into two categories, one for signals that are periodic, and one for signals that are aperiodic. Periodic signals use a version of the Fourier Transform called the Fourier Series, and are discussed in the next section. The Fourier Transform used with aperiodic signals is simply called the Fourier Transform.

### **The Fourier Transform**

The Discrete Time Fourier Transform (DTFT) is the member of the Fourier transform family that operates on aperiodic, discrete signals. The best way to understand the DTFT is how it relates to the DFT.

Introduction FFTW is a C subroutine library for computing the discrete Fourier transform (DFT) in one or more dimensions, of arbitrary input size, and of both real and complex data (as well as of even/odd data, i.e. the discrete cosine/sine transforms or DCT/DST). We believe that FFTW, which is free software, should become the FFT library of choice for most applications.

Introduction. This was the first web page I wrote on Wavelets. From this seed grew other web pages which discuss a variety of wavelet related topics.
