The systems engineering process is applied to each level of system development, one level at a time, to produce these descriptions commonly called configuration baselines. This results in a series of configuration baselines, one at each development level. These baselines become more detailed with each level.

A system engineer tasked to design an agile system in some functional domain starts with the design of the erector set architecture for that domain. This agile architectural pattern is depicted in Figure 3 as applied to an Erector set, and explained subsequently in its general pattern sense.

FE exam. The Fundamentals of Engineering (FE) exam is generally your first step in the process to becoming a professional licensed engineer (P.E.). It is designed for recent graduates and students who are close to finishing an undergraduate engineering degree from an EAC/ABET-accredited program.

The second part introduces the systems engineering problem-solving process, and discusses in basic terms some traditional techniques used in the process. An overview is given, and then the process of requirements analysis, functional analysis and allocation, design synthesis, and verification is explained in some detail.

A Primer for Model-Based Systems Engineering ii project, the fundamentals of ^blocking and tackling \_ are critical to success. Absent or poorly executed, they can doom the venture. In the case of a floundering effort, they are the key to getting back on track. The importance of knowing and executing the basics is the
